ACME BULLETIN & DIRECTORY BOARD CORP.

ACME means beauty • durability • utility

Our frames are made of metal or wood, as illustrated:

■ wood mouldings

OG

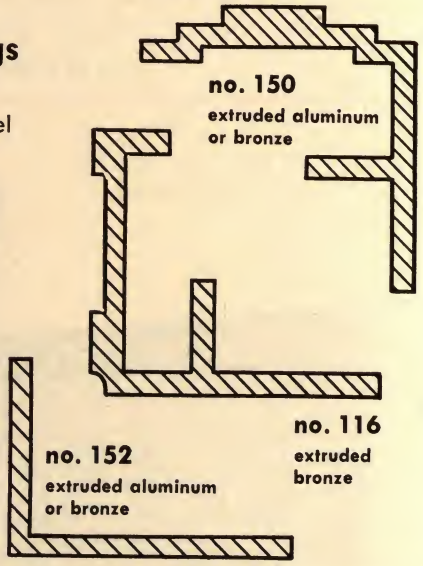
mahogany, oak walnut or any finish designated

flat

■ metal mouldings

kalamein bronze or
kalamein stainless steel

no. 362



no. 150 extruded aluminum or bronze

no. 116 extruded bronze

no. 152 extruded aluminum or bronze

Note: **The boards shown on the following pages can be made up using the above mouldings in most cases. Special shapes can be supplied in kalamein bronze or kalamein stainless steel at extra cost.**

Our strip boards are shipped complete with all names. Changeable letter boards will also be set up before shipping.

■ bulletin boards · changeable LETTER TYPES

name capacity of changeable letter board

In all cases the capacities listed in the table to the right allow for a heading in larger letters to be placed at the top of the board, such as, "DIRECTORY," (one line only), in either ¾", 1", or 1½" high letters depending upon the size of the board.

In all cases we have allowed ¼" space between each listing, excepting the ⅜" letters where ⅛" only is the spacing between each listing.

These capacities are approximate, and they are the maximum for each size board.

Our method of figuring is as follows:

¼" letters are 3 to 1"
⅜" letters are 3 to 1¼"
½" letters are 3 to 1½"
¾" letters are 3 to 2¼"

In other words, for figuring purposes you allow the width of the letter the same as the height. For example, assuming that there are 21 characters in the name, this will take up a space of 7" in width using ¼" letters.
